Rim Fire Revolvers

U.S. Fire Arms Mfg. Co.

Hartford, CT

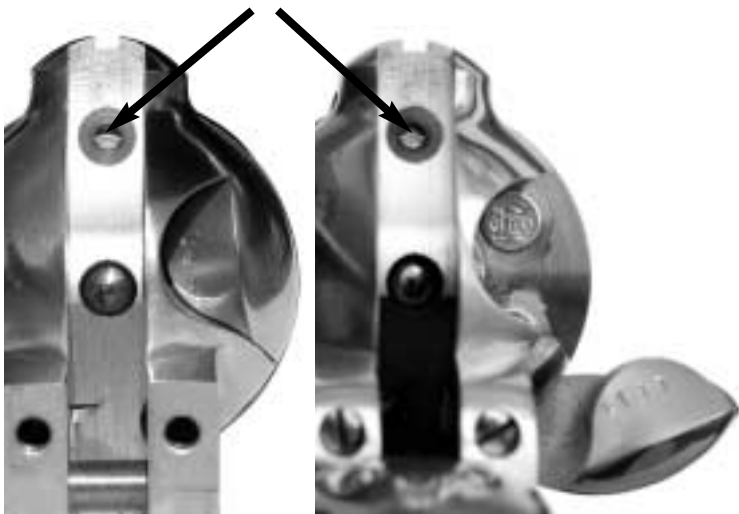

Special cautions regarding loading, firing and ejecting.

A unique feature of this revolver is that it has been built in such a way as to let the shooter have visual access at all times to the cartridge loaded in the cylinder.

Hammer design: solid firing pin in hammer- not in frame allows shooter to see chamber advance into battery.

Note: Gun has less chance of breaking due to broken firing pin because firing pin never touches cylinder face when in fully down position.

See the "Sunrise"

.22 Mag

.22 Long Rifle
